

The figure is a scatter plot with a fitted curve and a confidence interval. The x-axis is labeled 'wt' and ranges from approximately 1.5 to 5.5, with major ticks at 2, 3, 4, and 5. The y-axis is unlabeled but has a grid. The data points are colored: orange, brown, yellow, and red. A solid blue line represents the fitted curve, and a grey shaded area around it represents the confidence interval. The curve shows a general downward trend, starting at a high y-value for low 'wt' and decreasing as 'wt' increases, with some local fluctuations. The confidence interval is wider at the extremes of the x-axis.
